STOCKHOLM, SWEDEN

Senior software engineer and scrum master with 14 years of professional IT experience, spanning backend development, complex CI/CD pipelines, and systems engineering in the broadcast industry, and known among colleagues as an approachable mentor and team player. Much of it builds on over 25 years as a hands-on user of Linux, BSD and other free software, alongside studies in computational linguistics.

SKILLS

Programming Languages: Python, Go, Java, Perl, Lua, Bash

Operating Systems: Linux, Unix

CI/CD: Jenkins, GitHub Actions, GitLab CI

Containers & Orchestration: Docker, Podman, Kubernetes, OpenShift

Cloud & Infrastructure as Code: AWS, Terraform, Ansible

Databases: PostgreSQL, DB2, Oracle

Architecture & Methodologies: REST, System Architecture, Agile Methodologies

EXPERIENCE

Senior Software Engineer

Vizrt Sweden AB

Sept 2021 – present

Stockholm

I moved back to Sweden to work in R&D, on the enterprise MAM backend. This involves programming in multiple languages, and also managing a rather complex CI pipeline, both in terms of packages involved in composing the final product, and the systems involved in the pipeline, including Jenkins, GitLab CI, GitHub Actions, Artifactory and others. While continuing development work, I also took over scrum master responsibilities in my team.

- Led the transition of my team from using GitLab and GitLab CI to GitHub and GitHub Actions, unifying version control practices across the backend and client teams.
- Identified and fixed long-standing issues in the product's Ansible-based installer.
- Drew on my professional services background to deliver customer-driven features in R&D, including tape vaulting and a third-party media processing integration.
- Regularly brought in on critical and time-sensitive assignments, drawing on backend knowledge combined with a working understanding of how the product suite is used in practice.
- As scrum master, maintained team cohesion through a number of reorganizations and team size changes, at times counting up to twelve engineers in the team.
- Introduced sprint goals and a new process for estimating tasks and larger initiatives, and reworked the team's Jira workflows for scrum, issue management and CI/CD.
- Prepared and led a series of in-depth technical training sessions on the system architecture, helping new team members get up to speed.
- Took part in hiring for the team, screening candidates and conducting technical interviews.

Professional Services Technical Lead

Vizrt Thailand Ltd.

Jan 2020 – Aug 2021

Bangkok

- Was technical lead for professional services projects in the APAC region, meaning I handled requests for technical advice and estimates from colleagues in the APAC region working as technical sales representatives or solution architects, as well as guiding other systems engineers in best practices for custom software development and deployment.

Senior Systems Engineer

Vizrt Thailand Ltd.

2018 – Dec 2019

Bangkok

- Took over as lead systems engineer on an upgrade project for a major broadcaster in South Africa, bringing it to a successful completion without disruption to over 100 TV channels depending on the system for media delivery.

Systems Engineer

Vizrt Thailand Ltd.

Feb 2015 – 2017

Bangkok

Moved to Thailand, to continue working in a similar role but in projects in the APAC region. This would give me a chance to take part in large and small projects across the region, including work on-site at broadcasters in China, Thailand, South Africa, Israel and Singapore, as well as remotely to Malaysia, the Philippines, Australia, New Zealand and others.

- Provided training for customers, partners and Vizrt colleagues across the region in the use of the Vizrt MAM's third-party REST API and Python SDK.
- Was the lead systems engineer in a large project for a major broadcaster in India, helping two other teams to integrate with the Vizrt MAM system, one team belonging to a systems integration company, and one to the customer. Spent in total around six months at the customer site in Mumbai, providing instructions and support.

Systems Engineer

Vizrt Sweden AB

Jan 2013 – Jan 2015

Stockholm

Vizrt is a software company in the broadcast industry, where I worked with installation, configuration, documentation, testing and fixing of their media asset management (MAM) system.

- At first joined a QA team, doing manual testing for a couple of months.
- As a systems engineer, helped complete a successful upgrade project for a major British broadcaster.
- Implemented a proof-of-concept plugin integrating Vizrt products with Adobe After Effects which was used as a demo at a major trade show.
- Temporarily switched to R&D for three months to implement a new feature relating to tiered storage, using Perl and Python.

EDUCATION

Uppsala University

Computational Linguistics

2003 – 2007

Uppsala, Sweden

- Master's programme in computational linguistics (incomplete).
- Independent courses in computer science, literature, and philosophy.

CERTIFICATIONS

Certified ScrumMaster® (CSM®)

2022 – present

- [Verify credential](#)

LANGUAGES

Swedish: Native

English: Full professional proficiency

Thai: Elementary proficiency

HOBBIES

- Playing the board game [Go](#).
- Learning to make computer games as a hobby.
- [Photography](#).
- Learning and mentoring on [Exercism](#).
- Learning Thai.
